## IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1-6 Canceled
- 7. (Previously presented) A spot-type disc brake (1) comprising:
  - a brake caliper (3) straddling a brake disc;
  - at least one brake lining (4) displaceably arranged in relation to the brake caliper (3) for tribological interaction with the brake disc when the brake is applied;
  - at least one actuating device (5) arranged in the brake caliper (3) for exerting an application force on the brake lining (4); and
  - a spring assembly (10, 20) to adjust a clearance between the brake lining (4) and the brake disc after brake application, which is detachably fastened in the spottype disc brake (1), wherein the spring assembly (10, 20) includes a spring element (11, 21) which is at least radially and axially supported on the brake caliper (3) and, in addition, comprises a spring clip (12, 22) connected to the spring element (11, 21) and being detachably fastened at the brake lining (4) by way of two spring arms (13, 23).
- 8. (Previously presented) A spot-type disc brake according to claim 7, wherein the spring assembly (10, 20) has a substantially mirror-symmetrical design with respect to a center plane of the brake caliper (3).

- 9. (Currently amended) A spot-type disc brake according to claim 7, wherein the spring clip (12, 22) has spring arms (13, 23) and is are received in a rotatable fashion at [[a]] the brake lining (4) which is coupled to the at least one actuating device (5).
- 10. (Currently amended) A spot-type disc brake according to claim 9, wherein the spring arm (13, 23) is spring arms (13, 23) are hooked into [[a]] receiving element elements (19) which [[is]] are attached to the brake lining (4).
- 11. (Previously presented) A spot-type disc brake according to claim 7, wherein the spring clip (22) and the spring element (21) are designed as separate components.
- 12. (Currently amended) The integrated circuit arrangement spot-type disc brake according to claim 9, wherein the spring element (11, 21) is supported tangentially at the brake caliper (3).
